

Martins Adedeji Oni

About

I am a motivated and fresh full-stack web developer, ready to seize new opportunities in this field. I enjoy using HTML, CSS, and JavaScript to build stunning designs and responsive websites. I'm also proficient with Linux and GIT, an open-source version control system. My disciplinary origins were in Surveying and Geo-informatics, and I am a committed team player. In order to apply my gained tech expertise into practice, I'm now looking for a junior full-stack web developer position or internship.
